API Testing with Postman

1 GET Request (PokéAPI)

This GET request fetches information about Pikachu from the PokéAPI. The screenshot below shows the response with Pikachu's name, abilities, base experience, and forms.
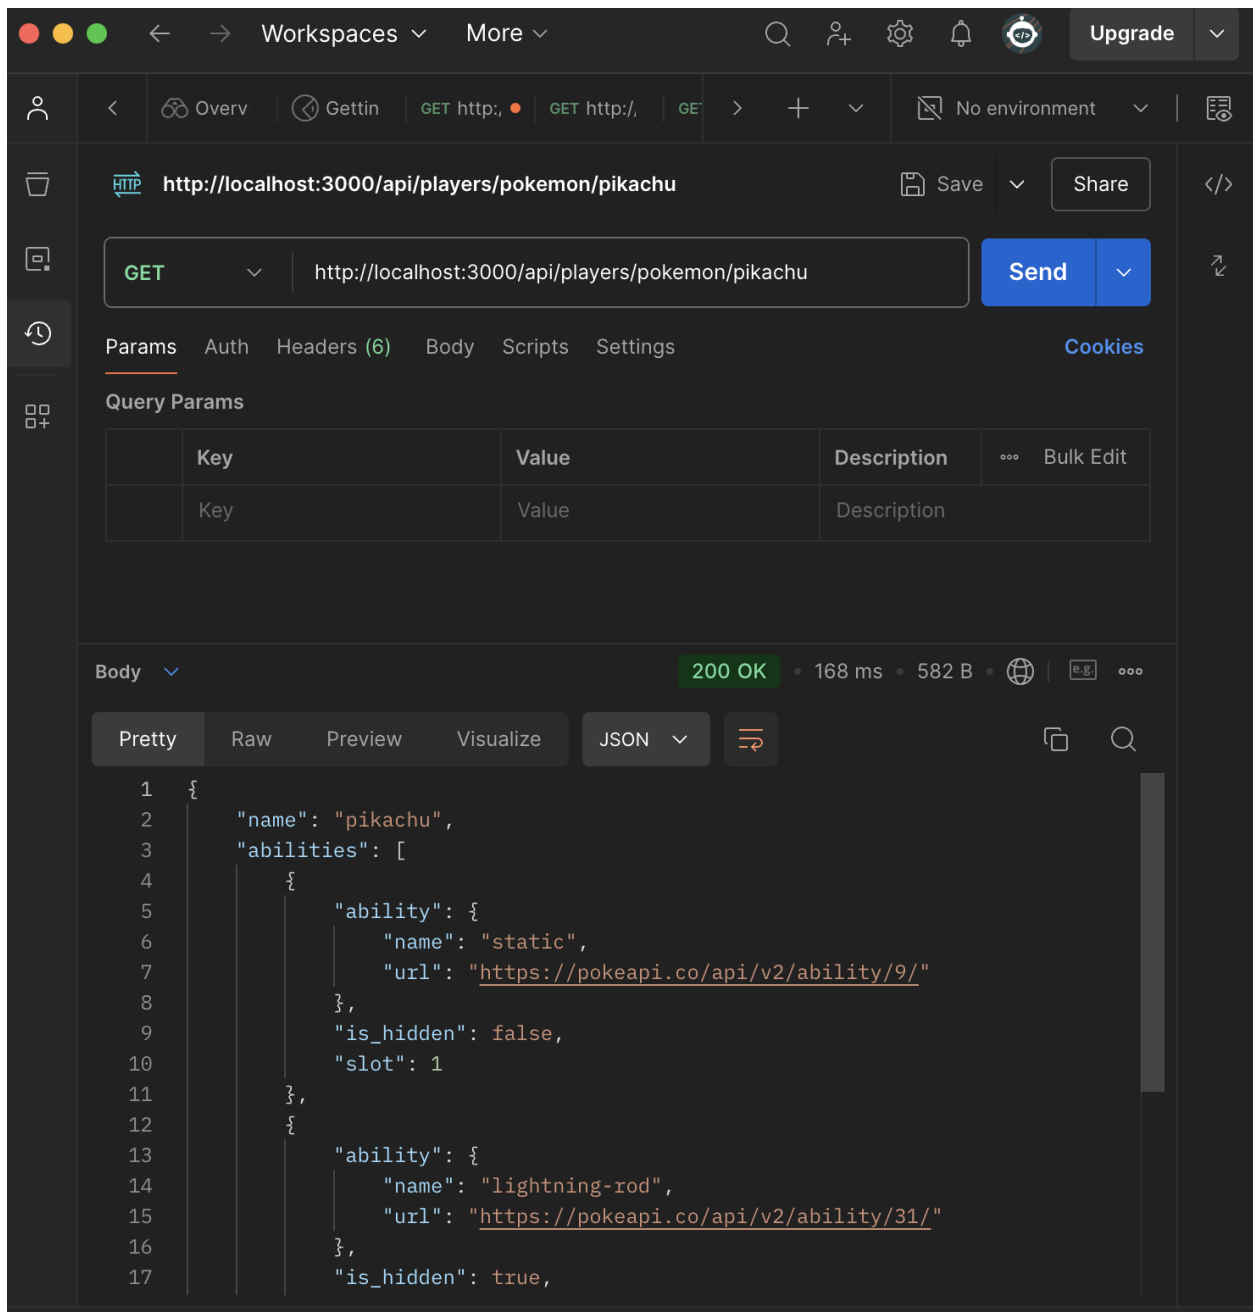

Figure 1: GET Request to PokéAPI

2 POST Request

This POST request creates a new player named "Jane Doe" with the number 7 and position "Midfielder." The screenshot below shows the successful creation of the player.
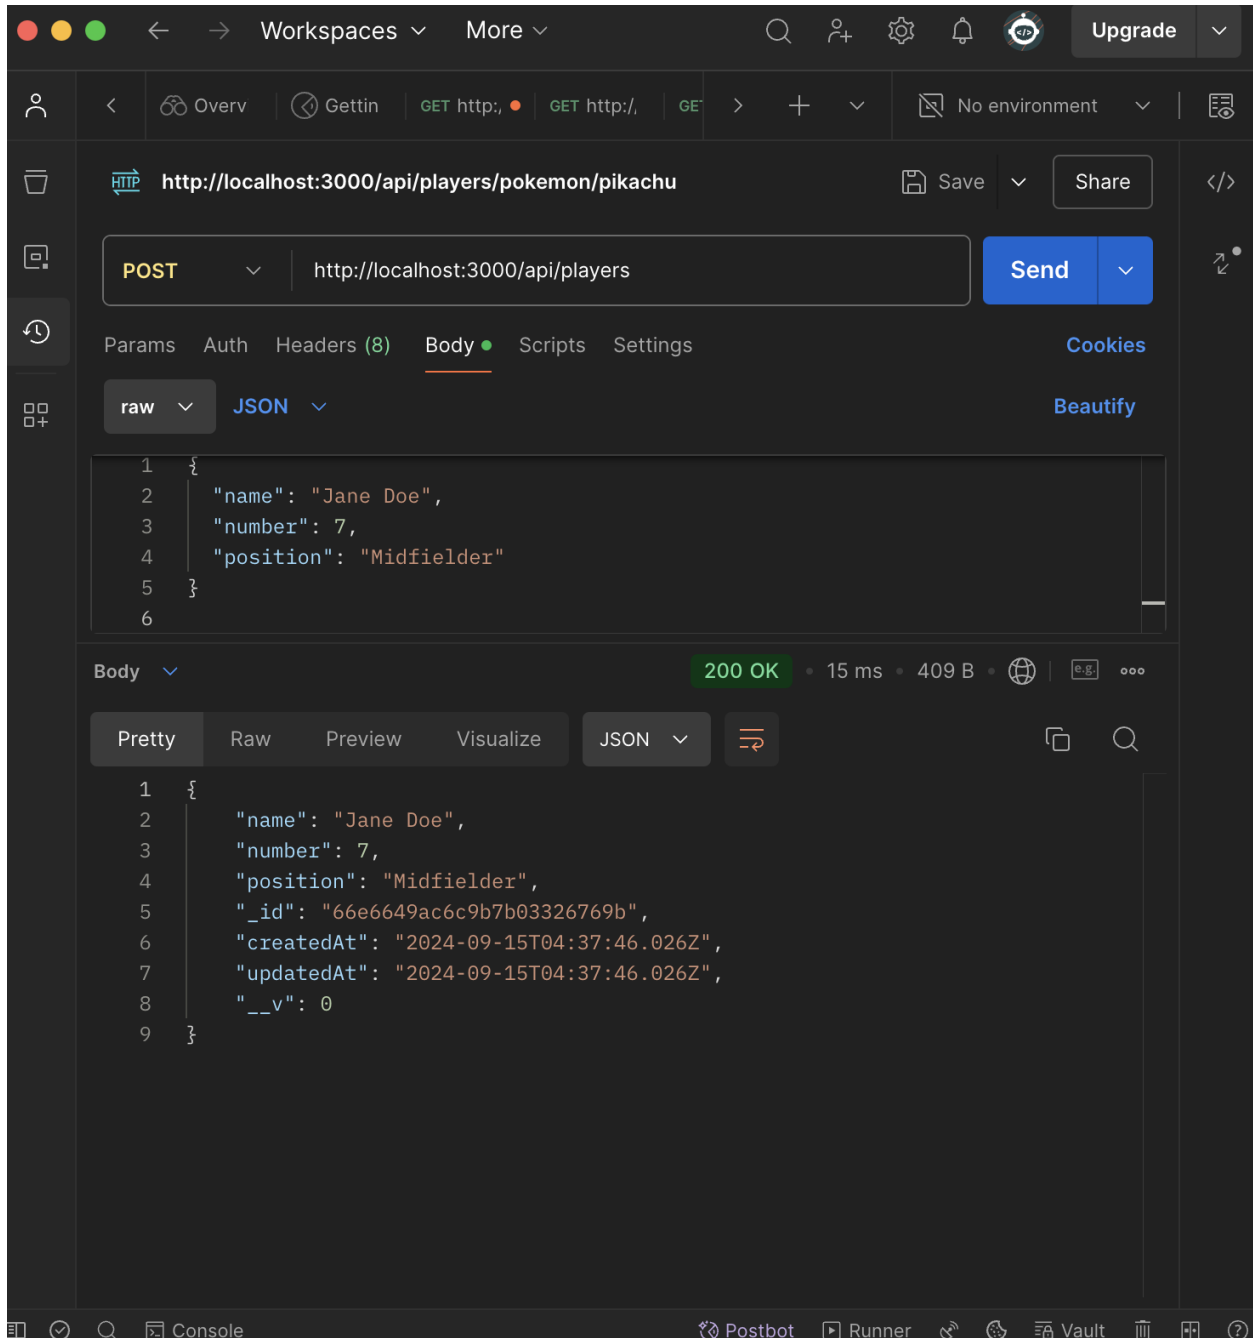

Figure 2: POST Request - Creating a Player

3 PATCH Request

The PATCH request updates the player's name to "Kin Doe" while keeping the number and position the same. The response shows that the update was successful.
